

JOBSHEET PRAKTIKUM

Mata Kuliah: Pemrograman Web Lanjut

Pertemuan 13 – Implementasi Table Actions & Custom Action di Filament

Capaian Pembelajaran

Setelah mengikuti praktikum ini, mahasiswa mampu:

1. Menambahkan **Record Actions** pada tabel Filament
2. Menggunakan predefined actions (Edit, Delete, Replicate)
3. Membuat custom action pada tabel
4. Mengupdate data langsung dari tabel tanpa masuk ke halaman edit
5. Menambahkan label dan icon pada action
6. Memahami konsep callback/action function pada Filament

Framework yang digunakan:

Filament

A. Latar Belakang

Pada tabel Post, secara default hanya terdapat tombol:

-  Edit

Sedangkan tombol Delete tersedia di halaman edit.

Agar lebih efisien, kita dapat:

- Menambahkan tombol Delete langsung di tabel
 - Menambahkan tombol Replicate (Copy Data)
 - Membuat tombol custom (misalnya ubah status Publish/Unpublish)
-

B. Menambahkan Delete Action

Buka file:

- PostsTable.php

Cari bagian:

- ```
->recordActions([
 EditAction::make(),
])
```

Tambahkan:

- `DeleteAction::make()`,

PraktikumPWL > app > Filament > Admin > Resources > Posts > Tables > PostsTable.php > PHP Intelephense > PostsTable > configure

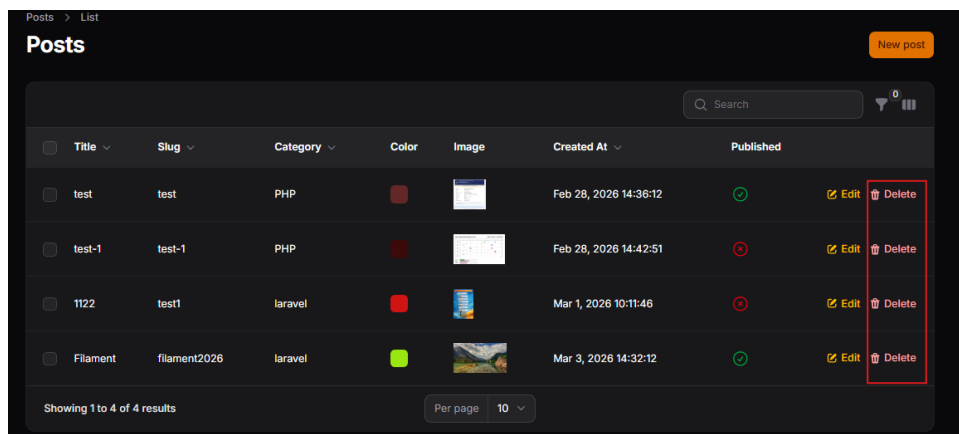

```

1 <?php
2
3 namespace App\Filament\Admin\Resources\Posts\Tables;
4
5 use Filament\Actions\BulkActionGroup;
6 use Filament\Actions\DeleteBulkAction;
7 use Filament\Actions\DeleteAction;
8 use Filament\Actions\EditAction;
9 use Filament\Tables\Table;
10 use Filament\Tables\Columns\TextColumn;
11 use Filament\Tables\Columns\ColorColumn;
12 use Filament\Tables\Columns\ImageColumn;
13 use Filament\Tables\Columns\IconColumn;
14 use Filament\Tables\Filters\Filter;
15 use Filament\Forms\Components\DatePicker;
16 use Filament\Tables\Filters\SelectFilter;
17
18
19 class PostsTable
20 {
21 public static function configure(Table $table): Table
22 {
23 return $table
24 ->columns([...
25 ->filters([...
26 ->recordActions([
27 EditAction::make(),
28 DeleteAction::make(),
29])
30 ->toolbarActions([...
31 ->filters([...
32]);
33 }

```

## ◆ Hasil

- Tombol Delete muncul di tabel
- Saat diklik muncul confirmation dialog
- Data terhapus tanpa masuk ke halaman edit

## ✦ C. Menambahkan Replicate (Copy) Action

Filament menyediakan action bawaan untuk menduplikasi data:

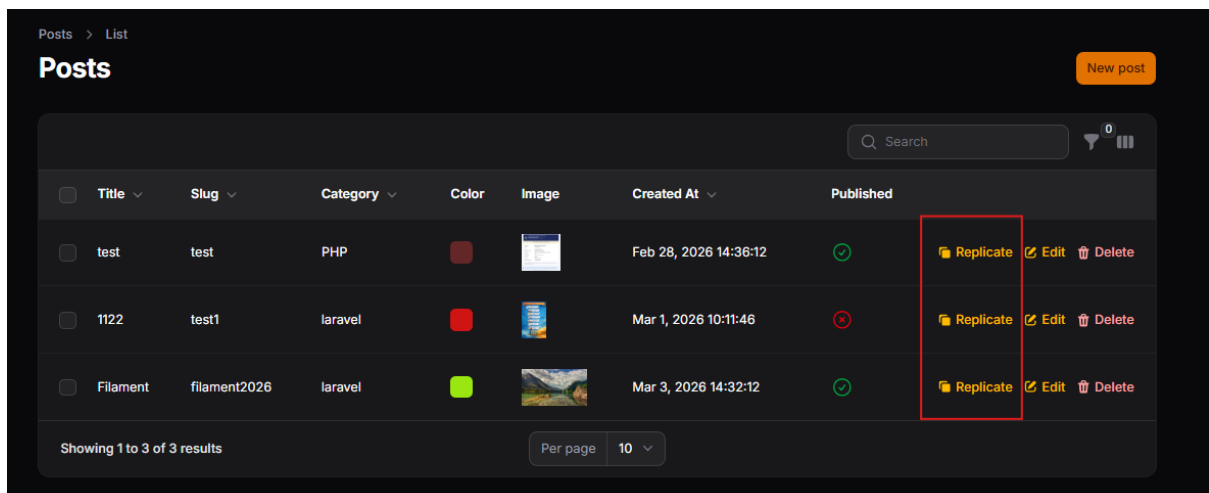

- `ReplicateAction::make()`,

PraktikumPWL > app > Filament > Admin > Resources > Posts > Tables > PostsTable.php > ...

```
1 <?php
2
3 namespace App\Filament\Admin\Resources\Posts\Tables;
4
5 use Filament\Actions\BulkActionGroup;
6 use Filament\Actions\DeleteBulkAction;
7 use Filament\Actions\DeleteAction;
8 use Filament\Actions\EditAction;
9 use Filament\Actions\ReplicateAction;
10 use Filament\Tables\Table;
11 use Filament\Tables\Columns\TextColumn;
12 use Filament\Tables\Columns\ColorColumn;
13 use Filament\Tables\Columns\ImageColumn;
14 use Filament\Tables\Columns\IconColumn;
15 use Filament\Tables\Filters\Filter;
16 use Filament\Forms\Components\DatePicker;
17 use Filament\Tables\Filters\SelectFilter;
18
19
20 class PostsTable
21 {
22 public static function configure(Table $table): Table
23 {
24 return $table
25 ->columns([...
26 ->filters([...
27])
28 ->recordActions([
29 ReplicateAction::make(),
30 EditAction::make(),
31 DeleteAction::make(),
32])
33 ->toolbarActions([...
34]);
35 }
36 }
```

### ◆ Hasil

- Tombol Replicate muncul
- Saat diklik → record baru dibuat dengan data yang sama

---

## 📌 D. Daftar Predefined Actions di Filament

Beberapa action bawaan:

| Action      | Fungsi                   |
|-------------|--------------------------|
| Create      | Membuat data             |
| Edit        | Mengedit data            |
| View        | Melihat detail           |
| Delete      | Menghapus                |
| Replicate   | Menyalin data            |
| ForceDelete | Hapus permanen           |
| Restore     | Restore data soft delete |
| Import      | Import data              |
| Export      | Export data              |

---

## 📌 E. Membuat Custom Action (Ubah Status Publish)

Misalnya ingin mengubah status published langsung dari tabel tanpa masuk ke edit.

---

### ◆ 1. Tambahkan Custom Action

- `Action::make('status')`  
    `->label('Status Change')`

```
PraktikumPWL > app > Filament > Admin > Resources > Posts > Tables > PostsTable.php > PHP Intelephense > PostsTable > configure
11 use Filament\Tables\Columns\TextColumn;
12 use Filament\Tables\Columns\ColorColumn;
13 use Filament\Tables\Columns\ImageColumn;
14 use Filament\Tables\Columns\IconColumn;
15 use Filament\Tables\Filters\Filter;
16 use Filament\Forms\Components\DatePicker;
17 use Filament\Tables\Filters\SelectFilter;
18 use Filament\Forms\Components\Checkbox;
19 use Filament\Actions\Action;
20
21
22 class PostsTable
23 {
24 /**
25 * WindowRef Refactor | Explain | Generate Function Comment | X
26 * public static function configure(Table $table): Table
27 {
28 return $table
29 ->columns([
30 ->filters([
31 ->recordActions([
32 ReplicateAction::make(),
33 EditAction::make(),
34 DeleteAction::make(),
35 Action::make('status')
36 ->label('Status Change')
37 ->checkbox()
38 ->default(fn($record): bool => $record->published),
39 ->action(function ($record, $data) {
40 $record->update(['published' => $data['published']]);
41 })
42])
43])
44 ->toolbarActions([
45])
46);
47 }
48 }
```

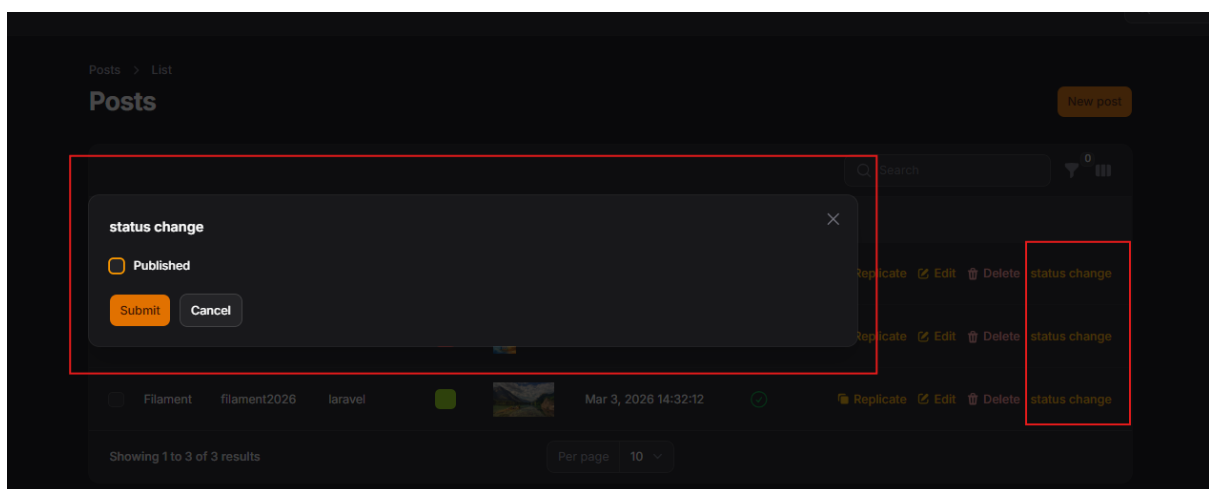

## ◆ 2. Tambahkan Form Input pada Action

Gunakan schema:

- ->schema([  
    Checkbox::make('published')  
    ->default(fn\$record):bool=>\$record->published),  
])

```
PraktikumPWL > app > Filament > Admin > Resources > Posts > Tables > PostsTable.php > PHP Intelephense > PostsTable > configure
11 use Filament\Tables\Columns\TextColumn;
12 use Filament\Tables\Columns\ColorColumn;
13 use Filament\Tables\Columns\ImageColumn;
14 use Filament\Tables\Columns\IconColumn;
15 use Filament\Tables\Filters\Filter;
16 use Filament\Forms\Components\DatePicker;
17 use Filament\Tables\Filters\SelectFilter;
18 use Filament\Forms\Components\Checkbox;
19 use Filament\Actions\Action;
20
21
22 class PostsTable
23 {
24 public static function configure(Table $table): Table
25 {
26 return $table
27 ->columns([...
28 ->filters([...
29])
30 ->recordActions([
31 ReplicateAction::make(),
32 EditAction::make(),
33 DeleteAction::make(),
34 Action::make('status')
35 ->label('status change')
36])
37 ->schema([
38 Checkbox::make('published')
39 ->default(fn($record): bool => $record->published),
40])
41 ->action(function ($record, $data) {
42 $record->update(['published' => $data['published']]);
43 })
44 ->toolbarActions([...
45]);
46 }
47 }
```

Hasilnya seperti berikut

### ◆ 3. Tambahkan Logic untuk Update Data

- ->action(function (\$record, \$data) {  
    \$record->update(['published' => \$data['published']]);  
})

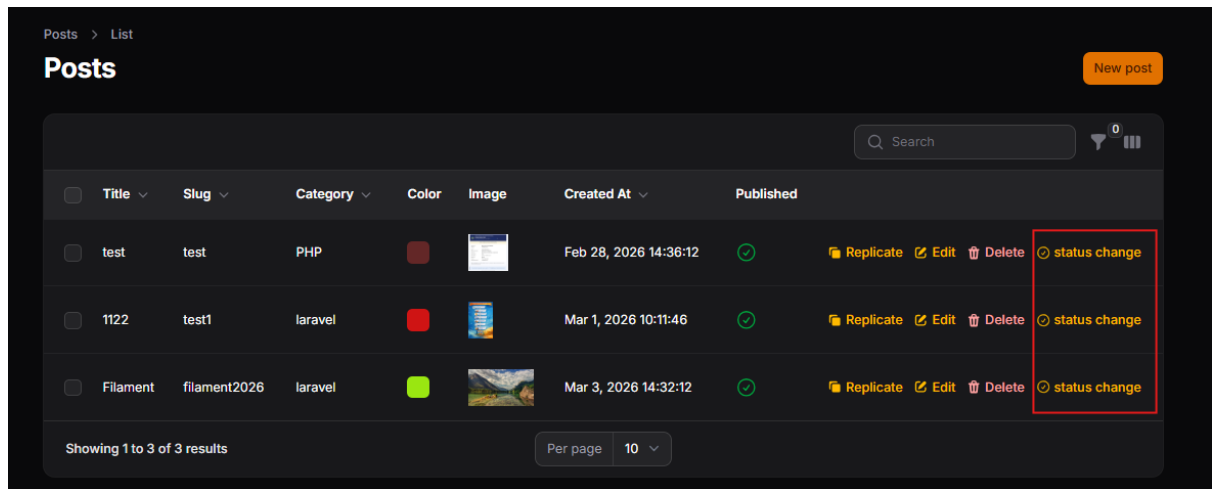

PraktikumPWL > app > Filament > Admin > Resources > Posts > Tables > PostsTable.php > PHP Intelephense > PostsTable > configure

```
11 use Filament\Tables\Columns\TextColumn;
12 use Filament\Tables\Columns\ColorColumn;
13 use Filament\Tables\Columns\ImageColumn;
14 use Filament\Tables\Columns\IconColumn;
15 use Filament\Tables\Filters\Filter;
16 use Filament\Forms\Components\DatePicker;
17 use Filament\Tables\Filters\SelectFilter;
18 use Filament\Forms\Components\Checkbox;
19 use Filament\Actions\Action;
20
21
22 class PostsTable
23 {
24 public static function configure(Table $table): Table
25 {
26 return $table
27 >->columns([...
28 >->filters([...
29])
30 >->recordActions([
31 ReplicateAction::make(),
32 EditAction::make(),
33 DeleteAction::make(),
34 Action::make('status')
35 >->label('status change')
36 >->schema([
37 Checkbox::make('published')
38 >->default(fn($record): bool => $record->published),
39])
40])
41 >->action(function ($record, $data) {
42 $record->update(['published' => $data['published']]);
43 })
44 >->toolbarActions([...
45]);
46 }
47 }
```

### ◆ 4. Tambahkan Icon

- ->icon('heroicon-o-check-circle')

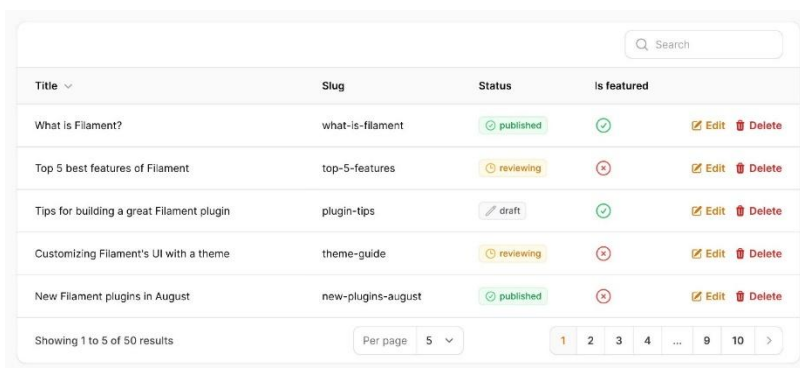

```
79 Action::make('status')
80 >->label('status change')
81 >->icon('heroicon-o-check-circle')
82 >->schema([
83 Checkbox::make('published')
84 >->default(fn($record): bool => $record->published),
85])
86 >->action(function ($record, $data) {
87 $record->update(['published' => $data['published']]);
88 })
```

## F. Contoh Lengkap Custom Action

- `Action::make('status')`
  - `->label('status change')`
  - `->icon('heroicon-o-check-circle')`
  - `->schema([`
  - `Checkbox::make('published')`
  - `->default(fn($record): bool => $record->published),`
  - `])`
  - `->action(function ($record, $data) {`
  - `$record->update(['published' => $data['published']]);`
  - `})`
  - `])`
  - `->toolbarActions([`
  - `BulkActionGroup::make([`
  - `DeleteBulkAction::make(),`
  - `]),`

## G. Ilustrasi Table Action (contoh)

filamentphp/filament

## #15001 The confirmation modal delete does not display...

### 📌 H. Fitur Tambahan Action

Filament juga menyediakan:

- `requiresConfirmation()` → menambahkan konfirmasi
- `color()` → ubah warna tombol
- `visible()` → tampil berdasarkan kondisi
- `url()` → redirect ke halaman lain
- `openUrlInNewTab()` → buka di tab baru

### 📌 I. Hasil yang Diharapkan

Mahasiswa berhasil:

- ✓ Menambahkan `DeleteAction`
- ✓ Menambahkan `ReplicateAction`
- ✓ Membuat Custom Action Status
- ✓ Mengupdate data langsung dari tabel
- ✓ Menambahkan icon dan label

### 📌 J. Latihan Praktikum

1. Tambahkan `Delete` & `Replicate` action
2. Buat custom action untuk toggle `publish/unpublish`

3. Tambahkan icon berbeda untuk tiap action
  4. Tambahkan confirmation pada custom action
  5. Screenshot:
    - Delete button di tabel
    - Replicate action
    - Custom status action
- 

#### K. Analisis & Diskusi

1. Mengapa action di tabel lebih efisien dibanding halaman edit?
  2. Apa perbedaan predefined action dan custom action?
  3. Bagaimana cara menambahkan validasi dalam custom action?
  4. Kapan kita menggunakan Replicate?
- 

#### L. Kesimpulan

Pada pertemuan ini mahasiswa telah mempelajari:

- Implementasi Table Actions
- Delete & Replicate bawaan Filament
- Custom Action dengan form input
- Update data langsung dari tabel

Fitur ini sangat penting untuk meningkatkan efisiensi manajemen data di admin panel.
